24-Oct-2026 – Saturday – Phase-1, Week-4 – Day1

Assignment: Include Upload Swagger API Link feature

Prompt:

Ask: Analyze my entire project as an API Architect.

Ask:

Currently, after launching the application,it navigates directly to the Upload File page.

I want to introduce a new UI feature before this page by adding a radio button with two options: Upload File and Upload Link.

The existing Upload File flow is already implemented and should remain unchanged.

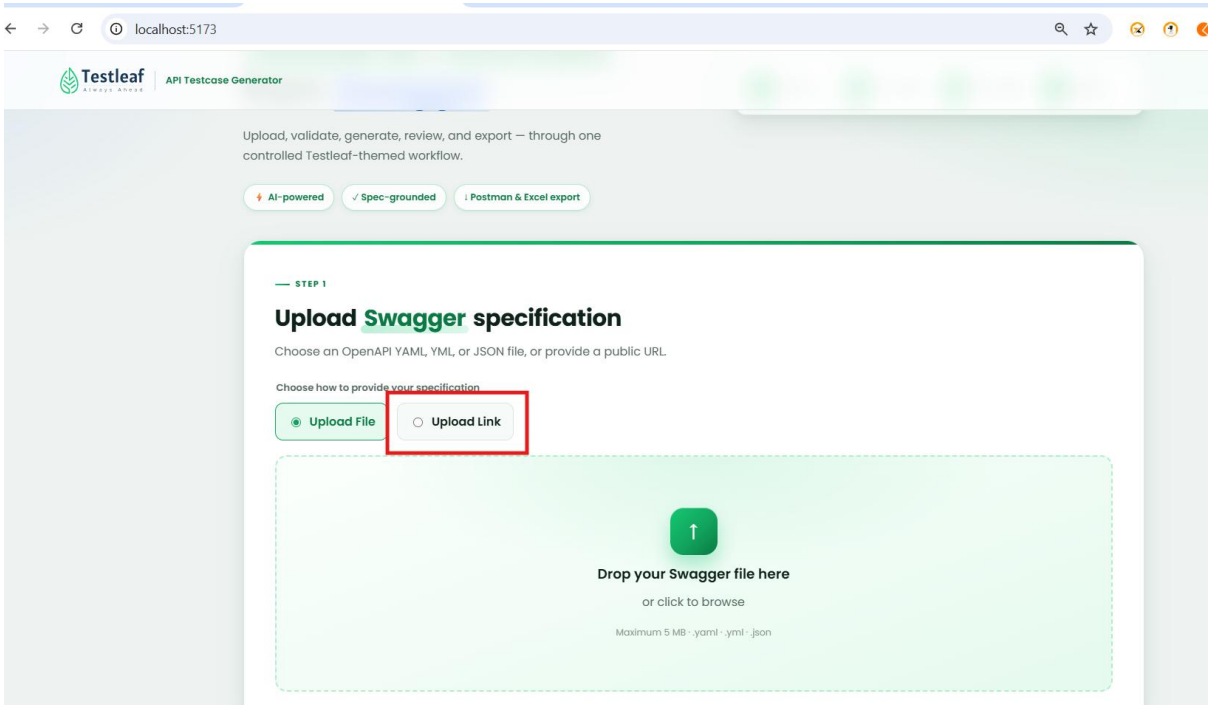

If the user selects Upload Link, the application should accept a URL as input and generate test cases from the content available at that link.

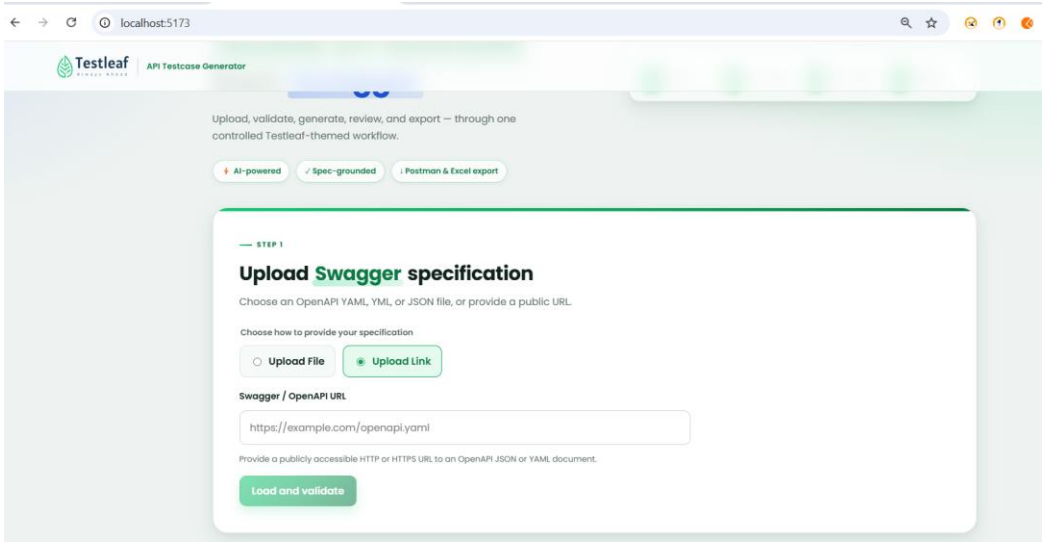

Identify the impacted files. Do not implement any changes yet; only provide the list of impacted files.

Once the analysis is complete, I will proceed with the implementation in Agent Mode.

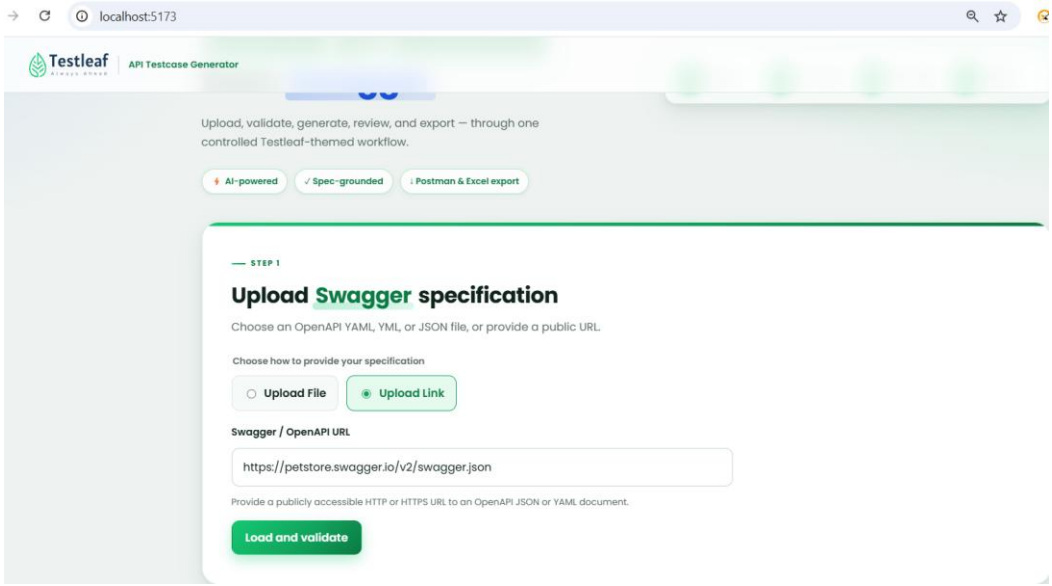

Agent: Proceed with implementation

Screenshot

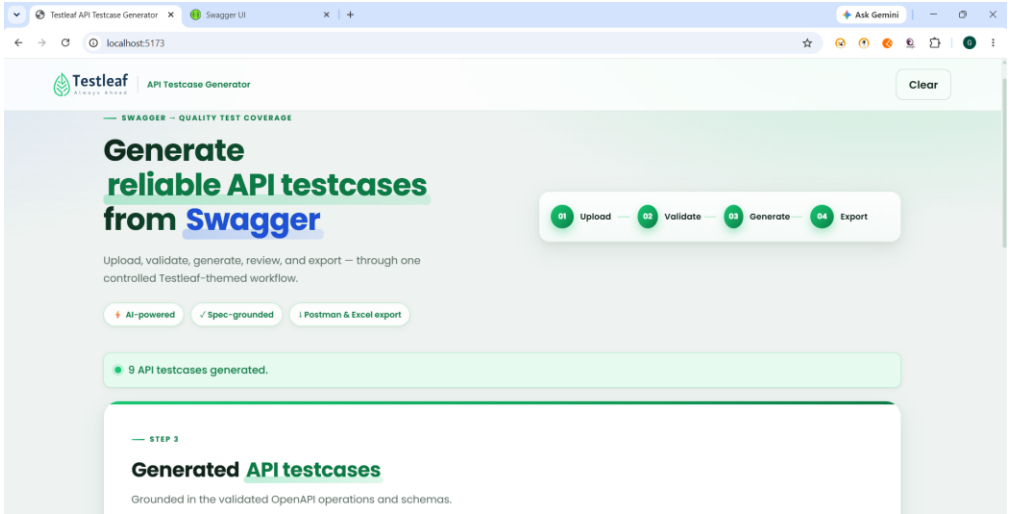

Entered Swagger v2 URL and clicked “Load and Validate” button.

9 API Test cases generated
